

# ALLER AQUA ANTI-STRESS

LET'S GROW  
TOGETHER

During the summer period, high water temperatures combined with intensified fish metabolism can cause oxidative stress in fish.

Environmental temperature affects both speed and efficiency of fish metabolism. Thus, feed intake of fish and nutrient digestibility vary with temperature.

To strengthen the immune system of tilapia during the summer, Aller Aqua has developed the Anti-stress feed. The feed contains extra vitamins and antioxidants which support fish production in terms of:

**FEED**

- Improved product stability
- Antimicrobial effect
- Nutritional value of organic acids as a fast energy source

**STOMACH**

- Reduction of pH
- Efficient pathogen reduction
- Activation of protein digestion

**INTESTINE**

- Antimicrobial effects
- Stimulation of enzyme secretion
- Better Ca and P digestion

**PERFORMANCE**

- Reduced stress level
- Increased gut and animal health
- Faster growth

HIGH QUALITY FEED FOR AQUACULTURE
